

Identification of initiatives and selection of practices

Through an identification process, the existing actions and activities at the local, national, regional and international level related to the topic of each training conference (WP2) will be recognised. Each partner will have to identify 10 initiatives for each topic. This will allow having an overview of the actions that have already been implemented and learn from them. Selecting criteria will be used to select the best practices for gathering initiatives. Each project partner, based on the selection criteria assigned, will have to select one the best practices in each field and present it during the respective training conference, so as to share knowledge with all the other partners and prompting discussion and debate.

AMU coordinates this work package. All partners will have to participate in the drafting of the synthesis of the best practices, which will then be published.

After each conference, AMU will prepare, with the coordinator's help and assistance, a compendium of the best practices presented.

Tasks:

- T1.1- Preparation of a compendium of the initiatives for each topic of the training conferences.
- T1.2- Definition of the criteria for selecting the best practices
- T1.3- Identification of one best practice (among the initiatives analysed) in the field of each one of the conferences' topics to present it during the training conferences.
- T1.4- Publication of the best practices selected and presented during the training conferences on the project website.

Deliverables:

D1.1- Publication of the compendium of the best practices identified by each project partner

The publication of the best practices' compendium will gather all the best practices selected by each partner and presented during the training conferences. After each conference, the best practices related to the topic being addressed will be published on the project website, so that after the conclusion of all training conferences there will be a complete and final product (WP2).
